PROFESSIONAL SUMMARY

Senior .NET Software Developer with 17+ years of experience spanning large enterprise organizations and mission-critical systems. Proven ability to inherit complex, undocumented legacy codebases — quickly assessing, stabilizing, and incrementally modernizing them without disrupting ongoing operations. Hands-on implementer with deep expertise in C#, ASP.NET, SQL Server, IIS, and the full Microsoft stack. Currently leading a migration from a legacy WPF/WCF monolith to a modern Blazor + REST API architecture with OAuth security and Docker hosting.

TECHNICAL SKILLS

Languages & Frameworks: C#, .NET Framework 4.x, .NET 6+, ASP.NET MVC, ASP.NET Core, Blazor, WCF, WPF, VB.NET, VBA, VBScript, JavaScript, AJAX, T-SQL

Data & Reporting: SQL Server, Entity Framework, Transact-SQL, Stored Procedures, SSRS, SAP Crystal Reports

Security & APIs: OAuth 2.0, JWT, REST API Design, HTTPS/TLS, CSRF/Cookie Policy, ASP.NET Core Identity, Windows Authentication

Infrastructure & Tools: IIS 10, Windows Server, Docker, Visual Studio 2022, GitHub, SVN, JSON

PROFESSIONAL EXPERIENCE

University of Utah (UIT)

Software Developer IV (Senior Level)

02/2021 – Present

- Member of a small four-person team responsible for a large, complex monolithic enterprise application built on WPF and WCF with no formal documentation — learning the system from the inside out and driving improvements independently.
- Leading modernization of the legacy WPF/WCF platform, incrementally migrating to a Blazor web application with a REST API layer, OAuth 2.0 security, Entity Framework ORM, and Docker-based hosting.
- Architect and hands-on implementer of new API layer replacing WCF backend — designing endpoints, security model, and data access patterns while maintaining backward compatibility with legacy clients.
- Own and maintain complex IIS-hosted ASP.NET MVC application supporting the existing WCF backend across Windows Server environments.
- Perform SQL Server performance analysis, query optimization, and schema navigation to ensure stability across enterprise data operations.

Utah Higher Education Assistance Authority (UHEAA)

Software Developer II

10/2008 – 12/2020

- Designed and built a company-wide ticketing system to create, update, and maintain change records across all organizational processes.
- Designed and implemented an enterprise identity and access management system providing centralized user provisioning, authentication, and access control across multiple applications using LDAP and role-based authorization models.
- Engineered scalable backend processing systems supporting over 1 million student loans per month, with a focus on performance optimization, reliability, and efficient resource utilization.
- Built high-volume batch letter processing system using lazy-loading to ensure reliable output across large print runs.
- Designed and implemented centralized error handling infrastructure for departmental scripts — including logging, alerting, and historical reporting — keeping all teams informed of production issues.
- Trained new developers on best practices, modern coding standards, and object-oriented design principles.

EDUCATION

Neumont University

B.S. Computer Science | GPA: 3.1

Salt Lake City, UT
01/2007 – 09/2008

Utah Valley University

A.A.S. Mathematics Education | GPA: 3.2

Orem, UT
03/2004 – 12/2006
